Geervan K

Software Developer, Full Stack & Backend Systems
geervan99@gmail.com | +91 8074792311 | Portfolio | LinkedIn | github.com/Geervan

Education

Manipal University Jaipur — Jaipur, India
B.Tech in Computer Science and Engineering GPA: 9.34/10 — *2024 – 2028*

Skills

Languages: TypeScript, JavaScript, SQL, Python, C/C++

Backend & Databases: Node.js (Express), Prisma ORM, PostgreSQL, RESTful API Design, JWT Auth

Frontend & State Management: React, Redux Toolkit, Tailwind CSS, Material UI (MUI), Framer Motion

Core Concepts: Relational Database Design, Role-Based Access Control (RBAC), Complex Allotment Algorithms, Data Structures & Algorithms

Tools: Git, GitHub, Vite, Postman

Experience

Software Development Intern — Mar 2025 – Present
Software Development Cell, Manipal University Jaipur — *Jaipur, India*

- Contributing to a production-grade system serving 2000+ students.
- Worked on backend logic including access control and allocation workflows.
- Improved reliability and scalability under concurrent usage with 0 issues in production.

Technical Team Member — Feb 2025 – Mar 2026
CampusAdda Pvt Ltd — *Jaipur, India*

- Coordinated with partner outlets to gather requirements and resolve issues.

Open Source Contributions

Astryx (Meta Open Source ecosystem) [GitHub] [My Commits]

- Authored and merged **13 pull requests** to @astryxdesign/core and @astryxdesign/cli packages of an open-source agentic design system.
- Resolved issues across **React, TypeScript, theming, design tokens, mobile interactions and cross-platform CLI compatibility**, contributing through root-cause analysis, testing, and code review an upper limit of 5 pr's are under review out of which 3 are ready to merge at this moment

Projects

Elective Management System [Demo] [Private]

- Developed a production-grade,academic system utilizing a modern full-stack architecture (**React, TypeScript, Node.js**) to streamline elective allocation for **2000+ active students**.
- Engineered granular **Role-Based Access Control (RBAC)** across multiple tiers (Student, Professor, Admins) and designed transaction-isolated database allocation algorithms to prevent preference conflicts.
- Optimized database reliability under concurrent high load by implementing indexed **Prisma & PostgreSQL** query patterns, achieving zero data anomalies during peak enrollment windows.

MUJ SLCM App (Unofficial) [Demo] [Private]

- Built and scaled a Flutter app and PWA for MUJ students to access the official SLCM, reaching **3,000+ cumulative users** with streamlined access to academic workflows.
- Reduced login and access time from **20s to 5-7s through authentication and performance optimizations.**
- Improved user experience with persistent sessions, secure credential storage, simplified navigation, and convenient access to attendance and marks.

Antigravity Portable [GitHub]

- Architected a local-first portable development environment (**PWA + Node.js**) accessible from any device through **Cloudflare Tunnels**, eliminating the need for dedicated cloud workspaces.
- Developed a custom HTTP/WebSocket reverse-proxy with real PTY terminal streaming, securely routing local development servers (Next.js, Vite, FastAPI, Flask) over a single authenticated endpoint.
- Built real-time diagnostics featuring multi-language error parsing, automatic project stack detection, and secure workspace sandboxing with Bearer authentication and path isolation.

Synapse: Zero-Knowledge IDE Memory Bridge [Marketplace] [GitHub]

- Built and published a local-first, zero-knowledge sync tool as a **VS Code Extension** and **Chrome MV3 Extension**, connecting browser LLMs directly to the local IDE.
- Implemented **AES-256** local encryption (Crypto-JS) to ensure code snippets, schemas, and design documents remain private on the developer's machine.
- Integrated **Transformers.js**, **Ollama**, **Supabase (PostgreSQL)**, and **OAuth 2.0** to enable offline AI processing, real-time synchronization, and secure authentication.
